DELIVERING SMILES

SINCE 1970

KC is the world's most trusted off-road lighting company and our products are used to ensure racers can make split second decisions, the military can achieve critical success and the adventurer in all of us can go farther. We have delivered iconic smiley face lights to customers since 1970 with an unwavering commitment to making premium products that are innovative and unique. At every intersection of our products, employees, customers, and industry partners we embrace our legacy and traditions while forging a brighter, better future for generations to come.

KC created the first off-road light in 1970 which quickly became the performance standard for the world's top endurance racers. We take features developed for racing and design them into products for the consumer off-road market delivering premium lighting products and adventure solutions for anyone that has a passion for taking vehicles on the paths less traveled. Today the iconic KC brand is a symbol of trust, quality and performance.

VISION

“

CREATE A BRIGHTER WORLD, FULL OF ADVENTURE THROUGH MEANINGFUL EXPERIENCES WITH EACH OTHER.

”

“

CREATE PREMIUM UNIQUE PRODUCTS THAT ILLUMINATE LIFE'S ADVENTURES.

”

MISSION

LIGHT TYPES

With over 40 years of lighting engineering and manufacturing experience KC leads the industry in offering the most diverse lighting selection available. We offer a full selection of lighting solutions across price, performance and features.

LED

An LED is a semiconductor based light source. LEDs are considered to be a form of solid state lighting. LEDs rely on electroluminescence instead of incandescence. LEDs have many advantages over traditional incandescent lights such as lower energy consumption, longer life, smaller size, increased physical resistance and are switched/powered digitally.

HID

Advancing beyond Halogen, High-Intensity Discharge (HID) lamps produce a lot more light and is much more power efficient. HID bulbs have no filament but instead tungsten electrodes. These electrodes are sealed in a quartz tube which is filled with both gas (usually Xenon) and various metal salts which produce an extremely intense light when ignited.

HALOGEN

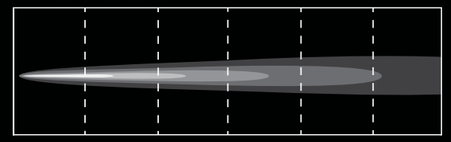
To overcome inefficiencies of standard incandescent light bulbs, halogen technology was created. Halogen bulbs are a form of incandescent light but uses a tungsten filament instead. This allows halogen to be brighter than standard incandescent lights.

BEAM PATTERNS

KC beam patterns are designed from the ground up drawing from real world user application needs. Depending on the variables like distance, speed, terrain and weather, our beam patterns are engineered to address the visibility challenges customers face across a variety of environments.

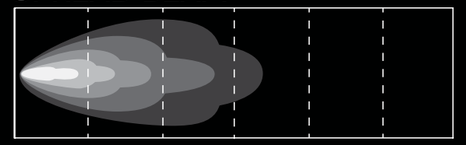
› OFF-ROAD :

SPOT BEAM



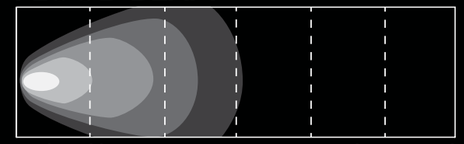
› Focused light prioritizing maximum distance and illumination needed at high speeds applications or remote areas.

SPREAD BEAM



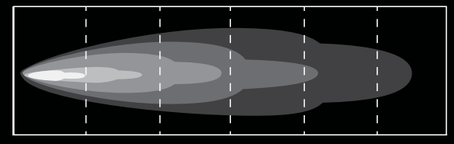
› Provides a wide beam of light that prioritizes horizontal, peripheral visibility and clarity.

FLOOD BEAM



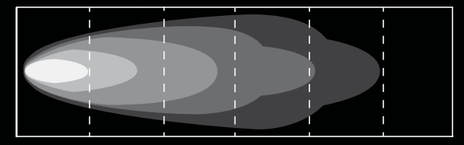
› Flood beams create an Omni-directional beam of light that illuminates larger general areas ideal for use as area work lights and backup lights.

COMBO BEAM



› Combination of different optics creating a beam that has a balance of distance and width.

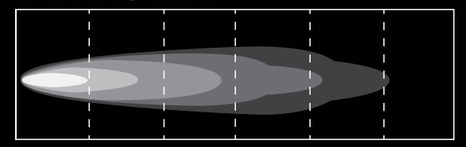
WIDE-40 BEAM



› A 40 degree wide beam with an effective cut-off designed to significantly increase visibility while cornering.

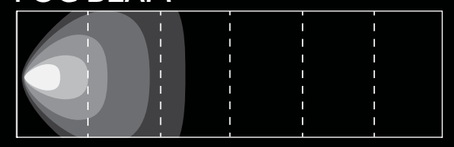
› STREET LEGAL :

DRIVING BEAM



› Provides a rectangular shaped beam pattern designed to supplement primary headlight visibility, safely. Driving Beams meet street legal SAE and ECE standards.

FOG BEAM



› Extremely Wide and Low pattern that prioritizes lower ground visibility used with primary headlights. Fog beams meet street legal SAE and ECE standards.

LED

KC LEDs are designed to maximize output while minimizing power draw. Our Performance LED lights are powered by Cree® LEDs, engineered with quality electronic components and designed with the best-of-breed features. KC LED Lights feature solid state rigidity, efficient energy consumption, longer life, compact form factor and are powered digitally. From Gravity® LEDs and KC FLEX™ LEDs to LZR and C-Series LEDs, KC offers a wide selection of LED lighting options across price, performance and features.

KC FLEX™ LED SINGLE, DUAL & QUAD

FLEX your lighting possibilities with KC's modular and expandable high performance LED lighting platform. KC's unique FLEX LEDs offer powerful lighting performance plus custom personalization never before available. Available in Single, Dual, and Quad models shown here.

HALOGEN

Halogen is a proven performance lighting technology and has been for over 40 years. KC has harnessed the explosive light output of halogen through our precision engineered reflector optic designs. Halogen lighting products feature high performance output, lower cost of ownership and a wide selection to fit every application. KC Halogens utilize the highest quality 55W and 100W bulbs. When combined with our precision engineered reflector optics, our Halogen lighting solutions provide performace light output at a good value across a variety of applications.

APOLLO PRO HALOGEN

KC Apollo Pro lights feature a super tough black Polymax™ housing with an integrated stone guard. The Polymax™ housing is made in the U.S.A. and features a flat "space efficient" profile. Available in 5" and 6" diameter models.

VEHICLE SPECIFIC
LIGHTING SYSTEMS

Beyond creating the best lighting products available on the market, KC makes it a priority to assure our light kits are easy to mount. We are committed to developing turn-key lighting systems that achieve a balance between ease of installation, aesthetic design and stability. From overhead mounts and A-Pillars to bumpers and backup kits KC offers a variety of lights, mounts and bracket combinations to ensure you are up and running quickly.

UTV SYSTEMS

Performance Lighting for your UTV is crucial while traversing through off-road terrains at night. KC HiLiTES UTV lighting options allow you to see the path ahead and steer clear of potentially hazardous obstacles that may arise. KC's full line of UTV overhead mounts give you the choice to run KC Gravity Pro6, FLEX Series, or C-Series LED Light Bars for the perfect balance of light performance, style and durability.
